

Going from concept to
clinical use with ML-based decision making

Conflicts of interest

- PI and anaesthetist at Amsterdam UMC
- Research and consulting grants from Edwards Lifesciences LLC
- Research grants from Philips NV
- Founder & CEO at Healthplus.ai
- Advisor to several VCs and accelerators

FDA APPROVALS FOR ARTIFICIAL INTELLIGENCE-BASED ALGORITHMS IN MEDICINE

Eric Topol ✓
@EricTopol

There's been a recent burst of peer-reviewed deep neural network [#AI](#) publications in medicine. Now there are 4 (*) prospective assessments. Progress. But algorithmic validation \neq clinical effectiveness.

Specialty	Images	Publication
Radiology/Neurology	CT head, acute neuro events	Titano, Nature Medicine, 2018
	CT head for brain hemorrhage	Arbabshirani, NPJ (Nature) Digital Medicine, 2018
	CT head for trauma	Chilamkurthy, Lancet 2018
	CXR for metastatic lung nodules	Gang Nam, Radiology 2018
	CXR for multiple findings	Singh, PLOS One, 2018
Pathology	Breast cancer	Bejnordi, JAMA, 2017
	Lung cancer (+ driver mutation)	Coudray, Nature Medicine 2018
	Brain tumors (+ methylation)	Capper, Nature, 2018
	Breast cancer metastases*	Steiner, Am J Surgical Pathology, 2018
	Breast cancer metastases	Liu, Arch Path Lab Med, 2018

Vision

From reactive to proactive health care

The Problem

It takes on average five days to spot infections in post-surgery patients. Current care is reactive and oftentimes too late to reduce the incidence and effect of these infections.

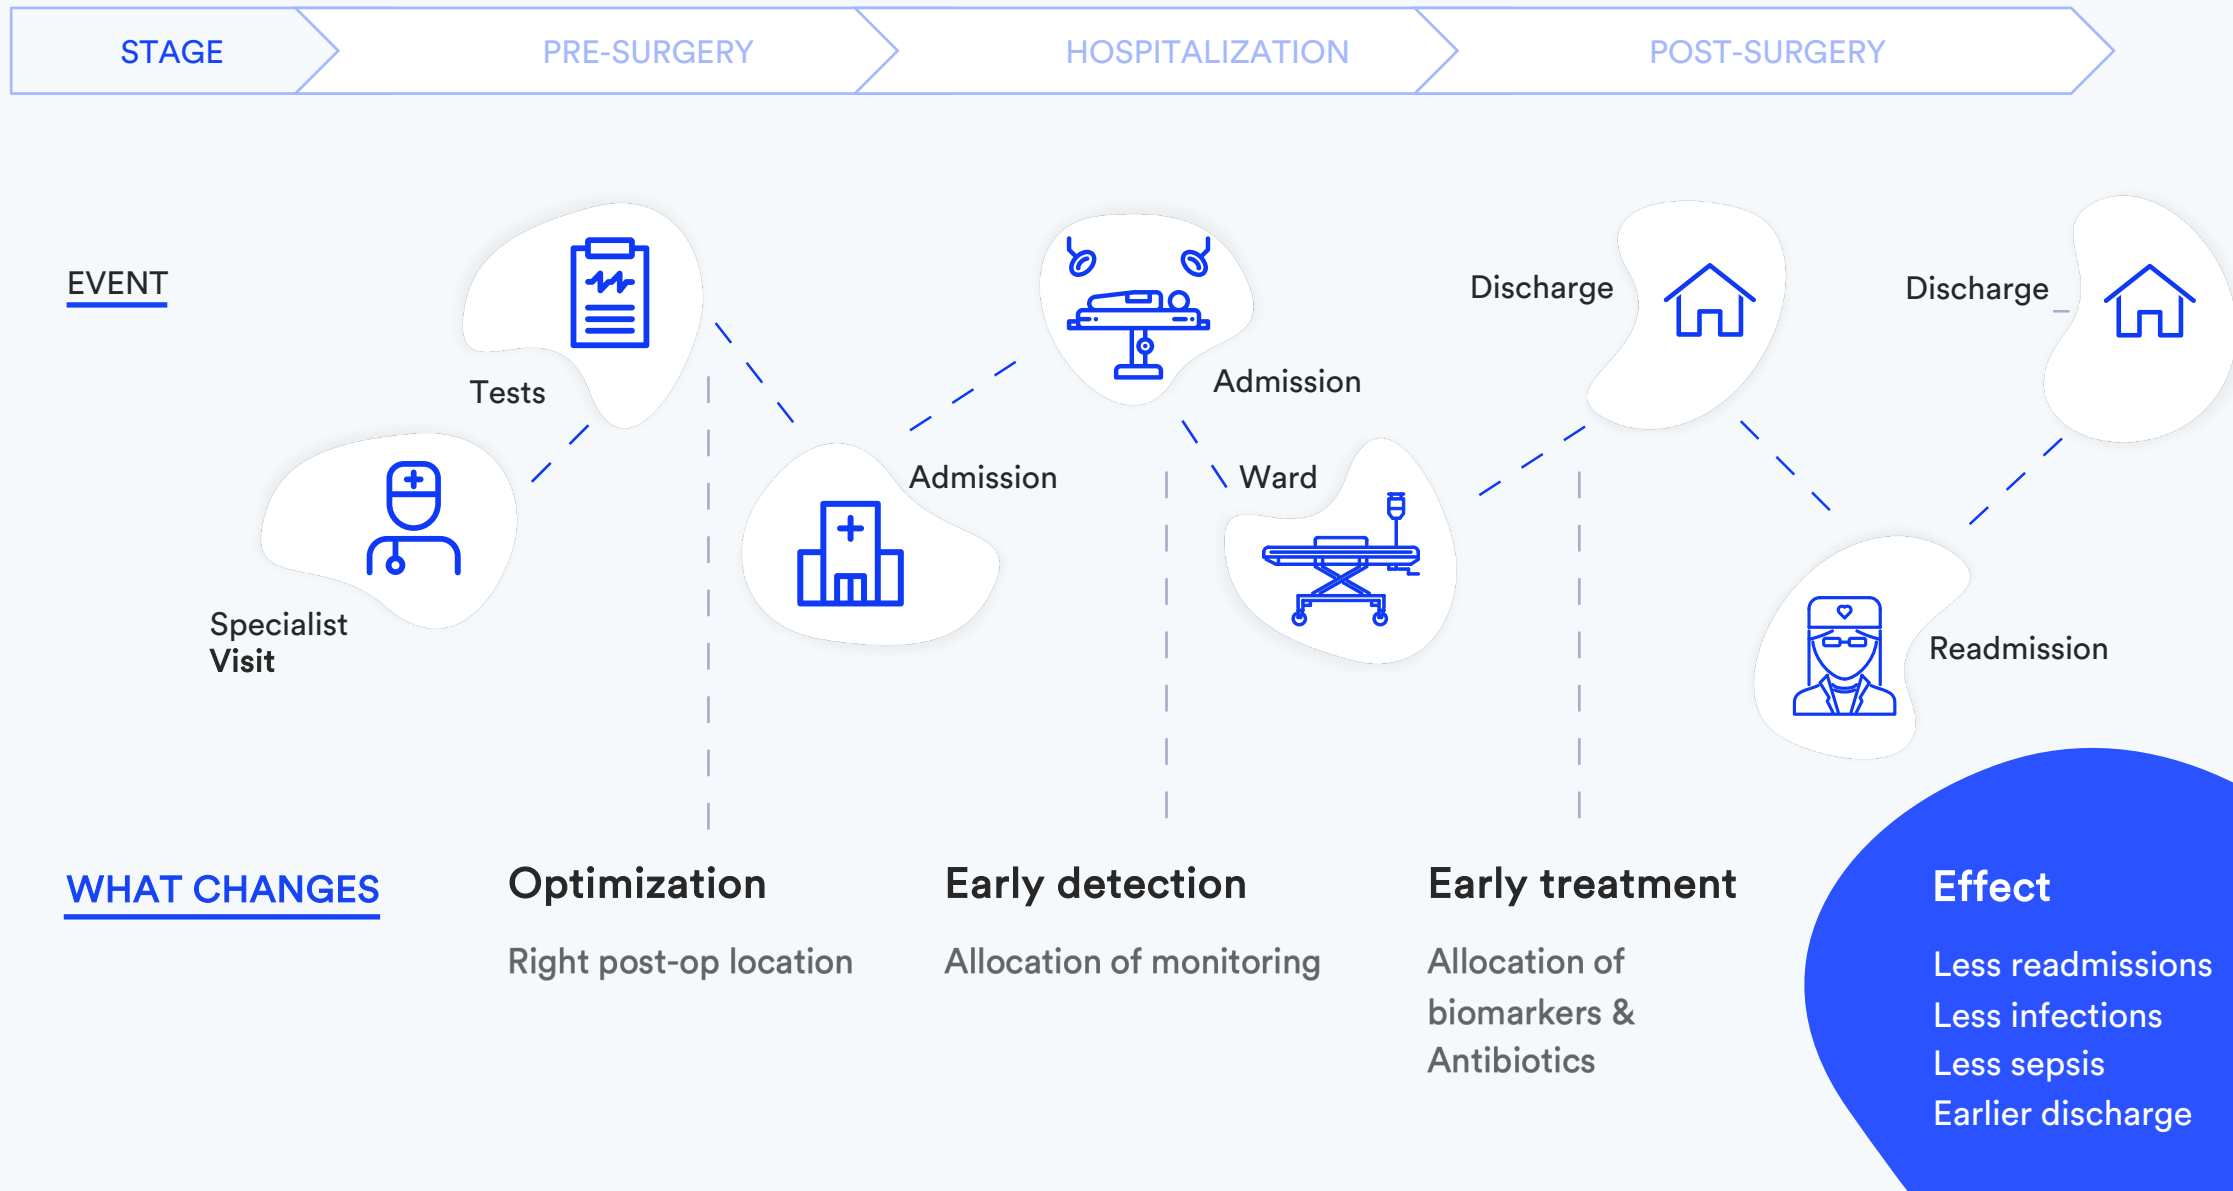

The Solution

A surgery risk management platform that predicts infections
& allows HCPs to reduce impact and incidence of infections.

- No new measurements needed
- Reusing existing data
- Machine learning
- Cloud based & work flow integrated

Changing the way we work?

The Technology

EHR integration:

Either per hospital or via backend of EHR partners like Cerner & Chipsoft

Machine Learning algorithms: (PERISCOPE)

Cloud-based microservices pipeline:

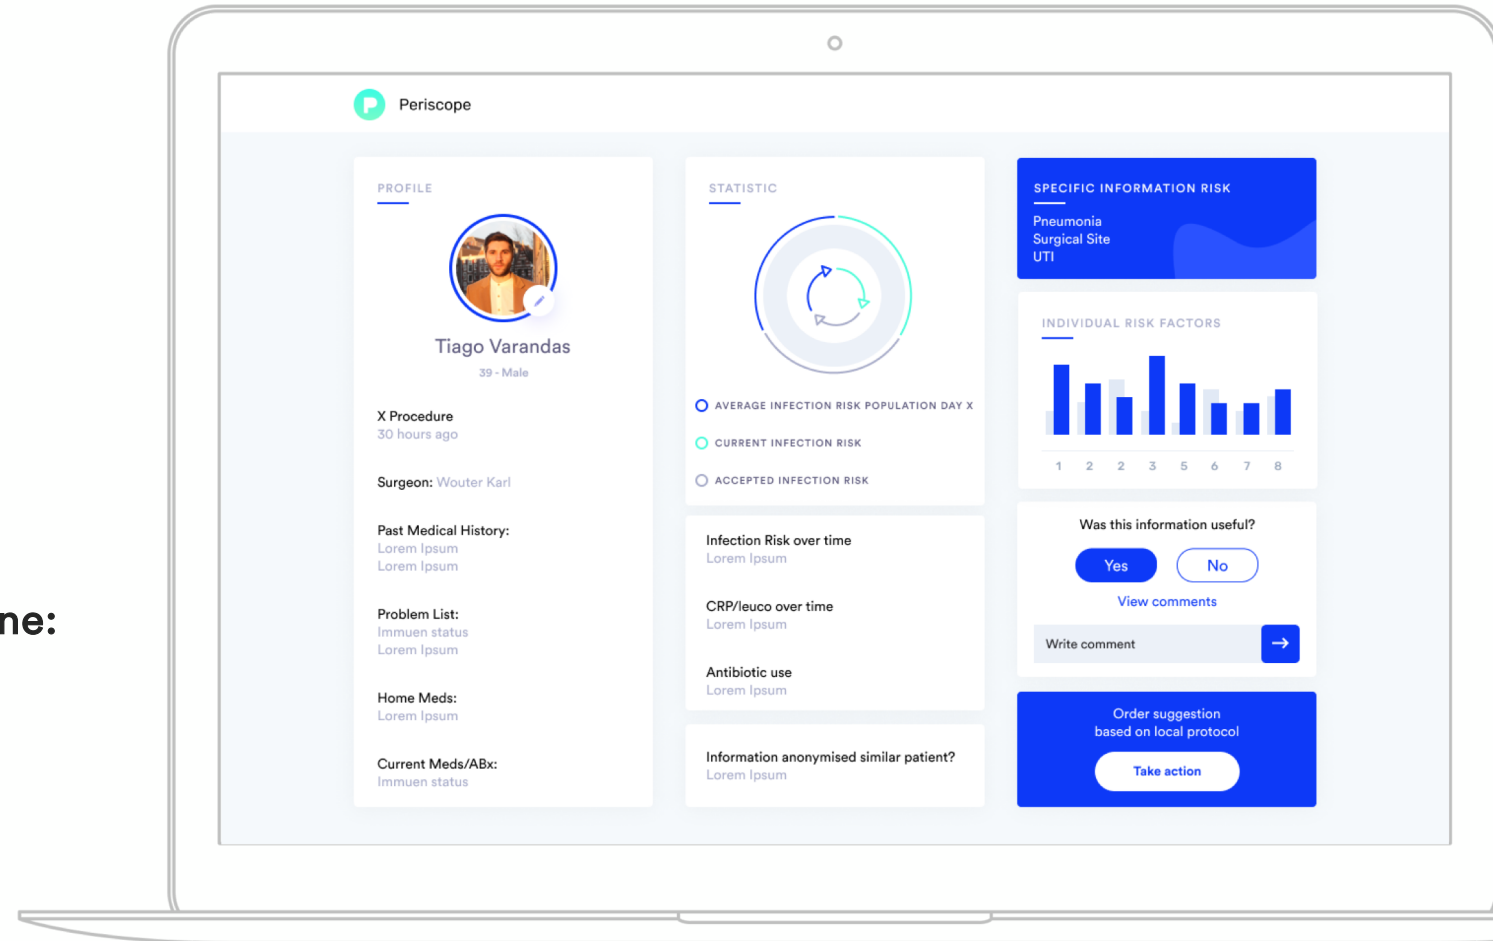

Modern web stack that normalizes data FHIR, SNOMED or other types of data, automate data wrangling, QA/QC etc

Or

On-premise:

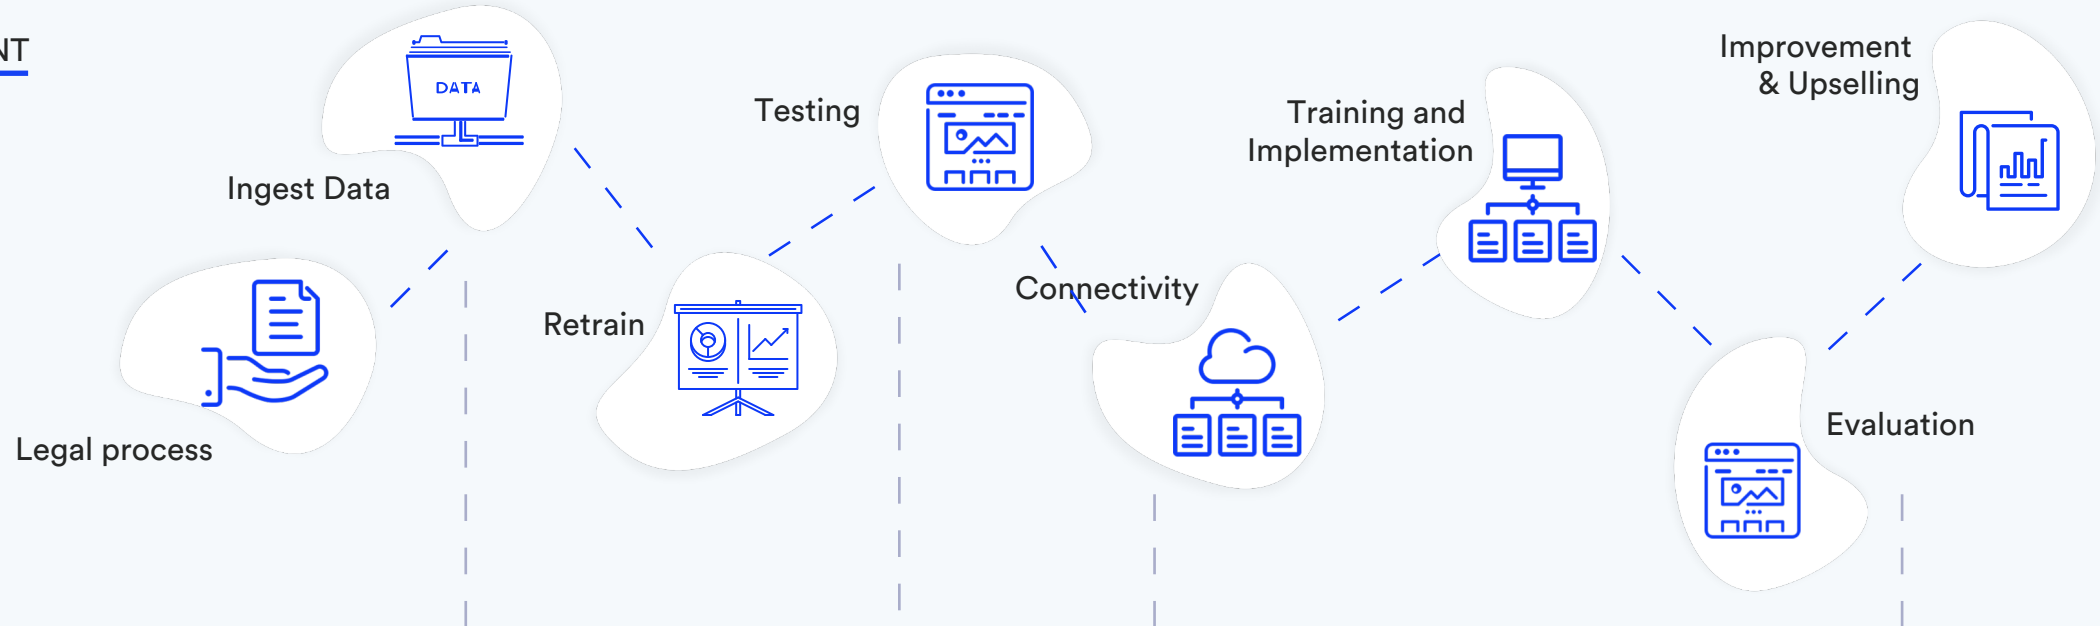

An on-site solution for cloud shy hospitals. Meta-learning goes to our cloud to continue central learning

Hospital Onboarding

EVENT

DETAILS

Connectivity

On-premise or cloud-based and setting data sharing standards (with or without EHR vendor)

Retrain

Recalibrate central model to local practices and population

Testing

Underwater testing and defining action suggestions with clinical-leads of each pathway (what is acceptable risk? What actions should be taken for monitoring or intervention?)

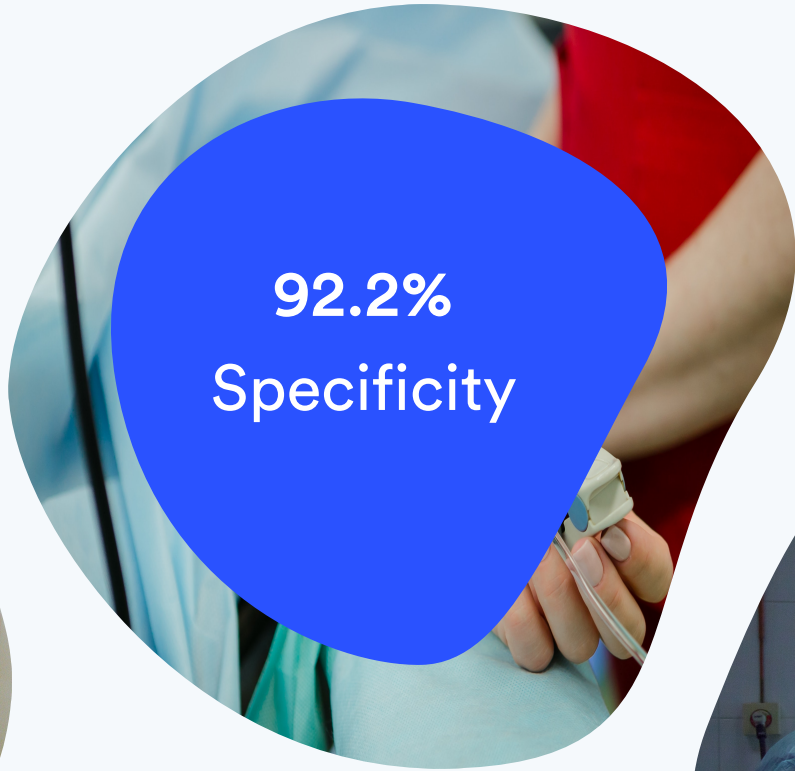

Evaluation

Report on use and clinical effectiveness

5 days prior to diagnosis

A circular inset image showing a hospital ward with several empty metal bed frames and white curtains.

88.5%
Accuracy

A circular inset image showing a close-up of a medical professional in a red shirt holding a medical device.

92.2%
Specificity

A circular inset image showing an operating room with surgical lights and a patient on a table.

77.5%
Precision

A circular inset image showing an ICU or hospital room with medical equipment and a patient.

88.5%
Recall

Multicenter – Eurostars trial

- Three phases:
 - Local retraining - internal validation
 - ‘Underwater testing - external validation
 - Implementation - clinical validation

Rigshospitalet

The Team

25 years in ML, 15 years in dev ops, 15 years in clinic and research, and 10 years of leading major & award-winning IT projects

Bart Geerts | CEO

(MD PhD MSc MBA)

Ass. professor in anesthesia, intensive care, and clin. Pharmacology with extensive experience in clinical R&D, business and working with AI at/with LUMC, WHO, CHDR, Edwards Lifesciences, Philips, Scyfer, Amsterdam UMC.

Adrian Lisko | CIO

MSc

Machine learning expert: Build deep neural networks, time-series analysis, signal processing, state-space models and filtering and so on within ING, TomTom, Kempen & Co, Scyfer and Qualcomm

Olivier Povel | COO

MSc

Hands-on experience in leading small and large teams (400+ people) with BI and AI projects since he studied AI at Utrecht University.

Lukas Chripko | CTO

BSc

Software architecture and design expert for complex structures, particularly API's, backend infrastructure and microservices. Build scalable solutions at alaTest.com Pingdom and 904Labs
